What is GatherSmart?

The GatherSmart solution is designed to help Morgan State University conduct system check and exposure monitoring for those returning to campus. This tool is a phone based app that will require you to answer several COVID-19 related questions before entering the campus or leaving your Residence Hall. This will replace the paper questionnaire.

What is Point & Click?

Point & Click is managed and utilized by the University's Health Center. This tool is a web-based software that will allow eligible on-campus students and employees to schedule their required COVID-19 tests and receive results.

What is SafetySkills?

SafetySkills is an online training platform that focuses on environmental, health and safety, human resources, and regulatory compliance. All members of the University community (regardless of location) are required to complete a general COVID-19 Awareness training. For on-campus students and employees, a separate training module will be assigned that includes requirements to be on campus.
